Dear Sir:

PRELIMINARY AMENDMENT UNDER 37 C.F.R. §§ 1.115, 1.121

AMENDMENT

REWRITE CLAIM 1 AS:

1. (Once amended) An apparatus, comprising:
a non-fiber optical element having a first optical aperture;
an endoscopic probe having first and second ends, the probe comprising a GRIN lens configured to carry illumination light over at least a distance about as long as the length of the probe, the first end being positioned to receive the illumination light from the first optical aperture; and
a detector configured to measure values of a characteristic of light emitted from the first end in response to multi-photon absorption events produced by the illumination light in a sample, the detector configured to produce an output signal for a multi-photon image of the sample.

[REWRITE CLAIM 2 AS:]

2. (Once amended) The apparatus of claim 1, wherein the probe further comprises a prism connected to an end of the GRIN lens.
